

"Micron-20" Ltd. became a beneficiary under a grant contract and implements project BG16RFOP002-2.001-0954 "Improving the production capacity and increasing the export potential of "Mikron-20" OOD" under procedure "BG16RFOP002-2.001 "Improving the production capacity in SMEs", financed by the Operational Program "Innovations and Competitiveness" 2014-2020, co-financed by the European Union through the European Regional Development Fund.

The project of "Mikron-20" Ltd. is aimed at increasing the production capacity and strengthening the export potential by purchasing drilling and drilling-milling machines, lines for stripping dry photoresist, for deoxidation, for copper surface etching by alkaline method, as well as a PCB repair station.

The introduction of these machines into operation will allow the production of printed circuit boards with new characteristics and high added value to begin, will allow the faster execution of more and more complex orders mainly from abroad, which in turn will increase the export potential and realized export revenue of the enterprise.

The radical improvement of the production process will lead to a significant increase in production capacity, will ensure the development of competitive, efficient and effective production, guaranteeing sustainability for the enterprise and increasing employment.

The duration of the project is 14 months.
