During 2016, Micron-20 Ltd had the honor to be a sponsor of the Aristotle Racing Team (ART), a formula student team of the Aristotle University of Thessaloniki, Greece.

Representing their new sport car in the competition in Hungary, the team won the prestigious second place! As well the team took part in the biggest competition of FSAE in Germany.

Our contribution was in production of printed circuit boards for a data logger – an inovative new device, used for the first time from the team.

Here are some quotes from the letter sent from our friends:

” This couldn't have happen if it wasn't of your help.

The purpose of this e-mail is to express our gratitude for being one of ART's sponsors and supporting our effort. I would also like to thank you for providing us with high quality products…

Your help has been of great importance in our effort…

We have been extremely satisfied by the quality of your work on PCBs … “
